Who is Robert Schoch?

Robert Schoch is an American geologist, professor, and researcher known primarily for his controversial theories regarding ancient civilizations and geological dating methods. Born in 1947, Schoch gained widespread recognition for his work on the Sphinx of Giza, where he proposed that the monument is much older than traditionally accepted by mainstream Egyptology. His research combines geology, archaeology, and historical analysis, challenging conventional timelines and suggesting the presence of lost advanced civilizations. Schoch holds a Ph.D. in geology and has taught at Boston University, where he has contributed extensively to studies on the geology of ancient monuments.

Academic Background and Expertise

Robert Schoch's academic career centers on geology and geophysics, with a particular focus on the analysis of weathering patterns on stone structures. His expertise allows him to assess the relative age of monuments by studying erosion and environmental effects, which he argues often contradict established archaeological chronologies. Schoch's interdisciplinary approach has been both praised for its innovation and criticized for perceived methodological issues, but it remains influential among alternative historians.

Notable Publications and Theories

Schoch has authored several books and papers that present his findings and theories. His most famous work, *"Voices of the Rocks: A Scientist Looks at Catastrophes and Ancient Civilizations,"* explores geological evidence for a much earlier civilization than previously believed. He argues for a revision of historical timelines, suggesting that some ancient structures, such as the Great Sphinx, might date back to 10,000 BCE or earlier. These ideas have sparked debate within academic circles and popular media alike.

Key Topics Discussed Between Joe Rogan and Robert Schoch

The conversations between Joe Rogan and Robert Schoch cover a range of subjects that challenge conventional understandings of history and geology. These discussions delve into ancient civilizations, geological evidence, lost knowledge, and the implications of revising historical timelines.

The Great Sphinx and Its Age

One of the central topics is Schoch's claim that the Great Sphinx of Giza is far older than the commonly accepted date of around 2,500 BCE. Schoch argues that water erosion patterns on the monument indicate exposure to significant rainfall, which last occurred in the region thousands of years earlier. This suggests that the Sphinx could date back to a period around 10,000 BCE, implying the existence of an advanced civilization at that time.

Lost Civilizations and Catastrophes

Schoch discusses theories about ancient global cataclysms that may have wiped out early advanced societies. These catastrophes, he suggests, could explain gaps in historical records and the sudden appearance of complex cultures in later periods. The idea of lost civilizations aligns with broader alternative history narratives that Rogan frequently explores on his show.

Geological Evidence Versus Archaeological Consensus

The dialogue often focuses on the tension between geological data and archaeological interpretations. Schoch emphasizes the importance of geological analysis in dating structures and events, which sometimes contradicts mainstream archaeological conclusions. This scientific debate raises questions about how history is constructed and the reliability of established chronologies.

List of Key Topics Discussed

- The age and origin of the Great Sphinx

- Evidence of ancient global floods and climate change
- The existence of prehistoric advanced civilizations
- Interdisciplinary approaches to studying ancient monuments
- The role of catastrophes in shaping human history
