Frequently Asked Questions

What are the most common conditions you treat in your practice?

I commonly treat conditions such as back pain, neck pain, headaches, and sports injuries, as well as issues related to posture and spinal alignment.

How do you determine the best treatment plan for a new patient?

I start with a thorough patient history, physical examination, and sometimes imaging studies to understand their condition. Then, I tailor a treatment plan based on their specific needs, goals, and overall health.

What techniques do you use during adjustments and how do you decide which to apply?

I use various techniques such as Diversified, Gonstead, Activator, and Thompson. The choice depends on the patient's condition, age, comfort level, and their response to previous treatments.

How do you ensure patient safety during chiropractic adjustments?

I perform a detailed assessment before any adjustment, use gentle and controlled techniques, and continuously monitor the patient's response to minimize any risks or discomfort.

What role does patient education play in your practice?

Patient education is crucial. I inform patients about their condition, posture, ergonomics, exercises, and lifestyle changes to support long-term spinal health and prevent recurrence.

How do you handle patients with chronic pain versus acute injuries?

For acute injuries, the focus is on reducing inflammation and pain quickly, often with adjustments and supportive therapies. Chronic pain management involves a more comprehensive approach including rehabilitation exercises, lifestyle advice, and sometimes interdisciplinary care.

What advice would you give to someone considering a career in chiropractic?

I would advise gaining hands-on experience through shadowing or internships, studying anatomy and physiology thoroughly, and developing strong communication skills to effectively connect with and help patients.
